Topics of Discussion:

1. HIFLD and HIFLD to the Regions Overview
2. DHS Infrastructure Information Collection Division (IICD)
3. Integrated Common Analytical Viewer (iCAV), DHS Earth, Automated Critical Asset Management System (ACAMS)
4. Homeland Security Infrastructure Program (HSIP)

ABSTRACT: The Homeland Infrastructure Foundation-Level Database (HIFLD) Working Group (WG) was established to identify, share, and protect homeland infrastructure geospatial information used for visualization and analysis on all classification domains. It now has over 3,000 members and contributing partners focused on identifying and facilitating acquisition of authoritative homeland infrastructure geospatial data, enhancing awareness and sharing of "best of breed" processes and technology. The working group bridges the geospatial communication gap between DOD, NGA, DHS, and USGS efforts. HIFLD members and contributing partners are involved in a wide range of functions including: Critical Infrastructure Protection; Emergency Preparedness Response and Recovery; Risk Management; Decision Support; Crisis and Consequence Management, Threat Analysis; Antiterrorism/Force Protection; Defense Support to Civil Authorities; Man-Made and Natural Hazard Modeling; Continuity of Operations and Continuity of Government Planning; and Government Facilities Management.
